Session Description: 26% of children in the United States will witness or experience a traumatic event before they turn four. Four of every 10 children in American say they experienced a physical assault during the past year, with one in 10 receiving an assault-related injury. 2% of all children experienced sexual assault or sexual abuse during the past year, with the rate at nearly 11% for girls aged 14 to 17. Nearly 14% of children repeatedly experienced maltreatment by a caregiver, including nearly 4% who experienced physical abuse. These are just some of the statistics so important (and heartbreaking) to the reality of our student populations. This session will focus on how Adverse Childhood Experiences (ACEs) affect the brain; the first half would be showing how trauma affects the brain and body and the second half would be strategies to use to help successfully reach and teach kids who have a history of trauma through restorative practices, non-shaming relationships, and social-emotional learning.

Session Description: "At Risk" can sometimes seem insufficient in describing what has already happened or is happening in the lives of our students. Often, whether they make it known or not, there are students in our classrooms who are struggling with poverty, instability at home, trauma, substance abuse, bereavement, and any number of other issues that impact their ability to engage in the vibrant learning communities we work so hard to foster. These students can come from any neighborhood, any type of ability, and any social group. Regardless of their situation, one powerful way that teachers can support these students in the classroom is to make a point of recognizing some of the specific learning needs at-risk students might have. This workshop will explore practical, research based strategies to help at-risk students experience success in the classroom. These strategies include classroom management and instructional methods that support every learner, but are especially useful in making sure that at-risk students have a real chance to overcome challenges in the classroom.
